Examiner's Comment

Applicant's remarks, see page 6, filed October 16, 2009, with respect to claims 26-29 have been fully considered and are persuasive. The claim rejections - 35 USC § 103 of December 15, 2008 has been withdrawn.

Previously, Ex Parte Quayle was filed on July 17, 2009 to correct minor informalities and indicated claims 26-29 were allowable.

Examiner's Statement of Reasons for Allowance

The following is an examiner's statement of reasons for allowance: the claims (e.g., 26-29) recites a light-emitting element which emits light using organic electroluminescence, comprising a light-emitting portion, a transparent substrate, a transparent electrode, an organic compound layer, a light-emitting layer, a rear electrode, a color-separation filter, a diffraction grating structure having a pitch of a fine convex-concave structure, wherein the color separation filter is selected so that, when white light emitted for the light-emitting portion, a minimum value of a spectral product obtained from a light-emission waveform of the white light and a spectral transmittance of the color-separation filter is equal to or less than 50% of a maximum value thereof.

Because none of the references disclosed the details of the minimum value of a spectral product obtained from a light-emission waveform of the white light and a spectral transmittance of the color separation filter, nor is there any motivation to further define the minimum value is equal to or less than 50% of a maximum value, the claims are deemed patentable over the prior art of record.

Kobori (USPN 6,327,554) teaches a light-emitting portion having a higher refractive index than a refractive index of air (column 8, lines 20-35; "... *a refractive index being $n \geq 1.5$... a refractive index being $1.8 \leq n \leq 2.1$... index being $1.7 \leq n \leq 2.1$* "), and wherein a minimum light-emission value is great than 0% and equal to or less than 50% of a maximum light-emission value when white light is emitted from the light-emitting portion (FIGS 12-21; column 2, lines 10-60; "... *the changes in the thickness of films forming an organic EL device give rise to changes in the spectra and luminance of light emitted out of the device ... which enables light to be effectively taken out of even a structure comprising many reflective surface*"). However, Kobori fails to specify that a minimum light-emission value equal to or less than 50% of a maximum light-emission value when white light is emitted from the light-emitting portion by selecting the color separation filter.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to JACOB Y. CHOI whose telephone number is (571)272-2367. The examiner can normally be reached on Monday-Friday (10:00-7:00).
